

D&TS GmbH

PROFESSIONAL WORKSHOP ACTUAL/TARGET ANALYSIS

WOULD YOU LIKE TO PERMANENTLY IMPROVE THE DATA QUALITY IN YOUR COMPANY?

Then there is no way for you around professional master data management.

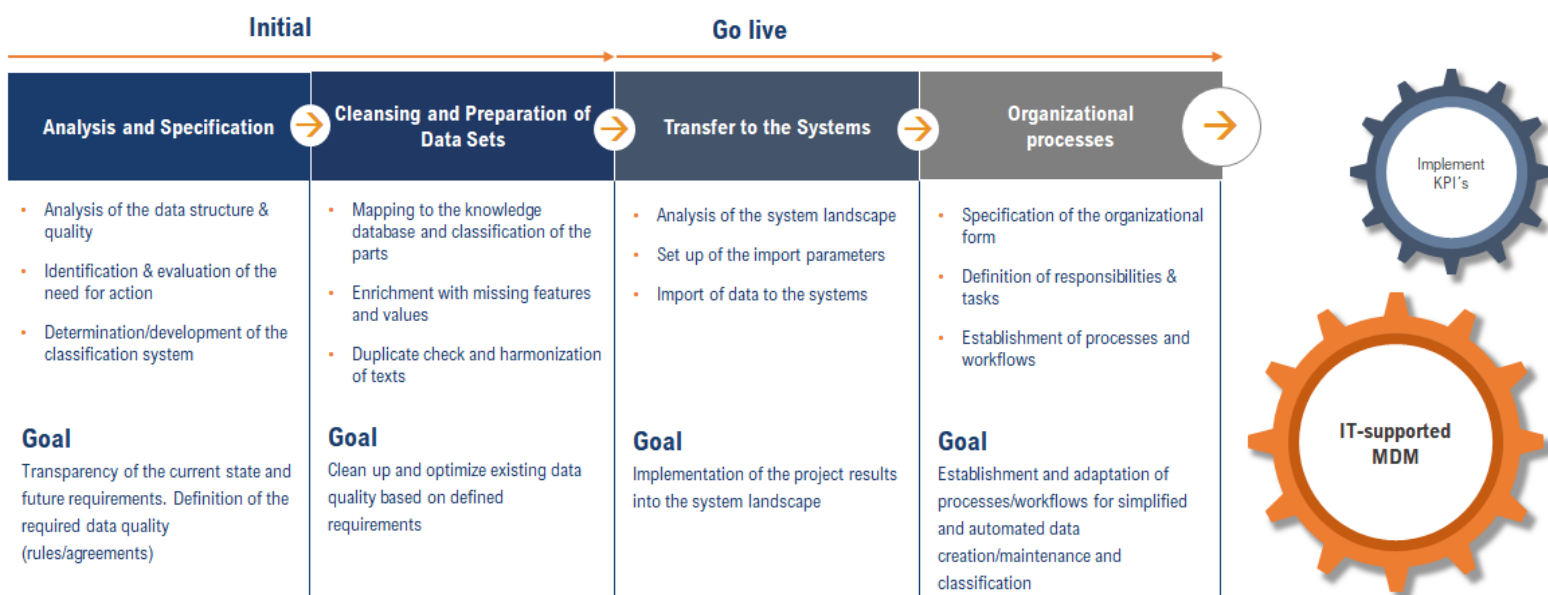

The digitalization of the corporate world poses major challenges to companies: Data maintenance, data development and, above all, the creation of good master data quality. As only optimal master data are cross-departmental success components, form an important basis for corporate decisions and reduce process costs.

Secure your future data quality. With more than 20 years of experience and our IT tools, we show you the right path to optimal material master data complying to processes.

In our **professional workshop**, we analyze your opportunities or risks and support you on your way to a sustainable master data and classification project.

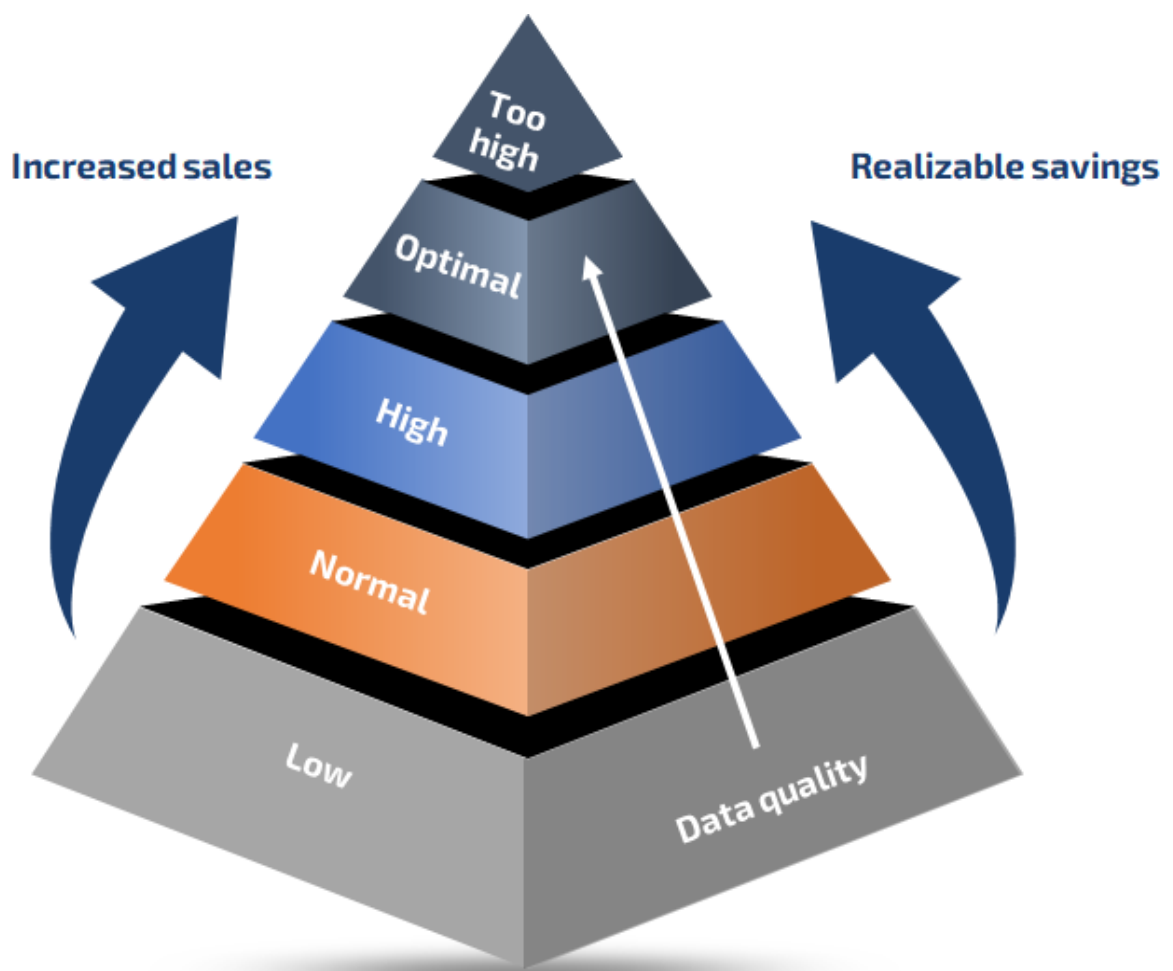

Where does your company stand today, what do you want to achieve and what does this mean in concrete terms? We will help you to work this out and subsequently create a professional recommendation for action tailored to your needs. If you wish, we will also support you in the implementation.

The right path for your master data management project

The right MDM/digitalization strategy improves your EBIT by:

- ✓ Increased degree of automation
- ✓ Master data complying to processes (cross-departmental)
- ✓ Process cost savings
- ✓ Larger supplier choice
- ✓ Realizable tenders
- ✓ Greater negotiating leverage through price comparison
- ✓ Improved search in e-catalogs
- ✓ Greater customer friendliness
- ✓ Better customer loyalty
- ✓ Increased reusability of materials
- ✓ Reduced stocks
- ✓ Avoidance of duplicates

Data Quality Pyramid

Professional workshop

Professional Workshop is the optimal basis for starting your master data project.

In our **professional workshop**, we analyze and evaluate, with you, which measures are useful and are necessary for your company. This includes the current data quality, the processes associated with material creation and maintenance but also all adjacent ones such as maintenance and purchasing processes.

In the first part of the workshop, we determine the ACTUAL STATE together with you – a pure fact analysis, without evaluation or distortion. The assessment of the current challenges and which measures are necessary for improvement is the content of the second phase of the workshop. The TARGET STATE is described based on a brand writing, and the most important goals are then prioritized in the team. The TARGET state looks at the company's goals as well as the wishes and problems of the employees. In doing so, we also show a comparison between what is possible and what may be “too much”.

For the evaluation of the workshop, you will receive professional and practical recommended actions that will support you in successfully tackling the master data management project. By looking at the big picture, you also gain a better company-wide understanding of master data management activities.

Added value

- Direct exchange with experts
- Transparent results
- Specific recommended actions
- Strategic and independent consulting
- Best practice solutions

The goal is to increase the profitability of your company.

Services

- 0,5 days of preparations

Target audience

Management * IT * Maintenance * Materials Management * Purchasing *
Warehousing * Master Data Management * Technical Service * Construction

The cost of the workshop is € 3,900 (net) plus travel expenses

D&TS designs the digital future with you, entirely according to your wishes and goals!

For more than 20 years, D&TS has been providing innovative IT solutions and services for master data management and classification. With our consulting (data governance, etc.), our data service and our IT solutions, we are among the leading all-round providers on the market.

We ensure high-quality and sustainable (master) data quality and increase the level of automation for large and medium-sized companies. We specialize in the following industries:

- Mechanical and plant engineering
- Manufacturing companies
- Component manufacturers

Only with correct material master data can companies achieve improvements in almost all processes along the value chain, make informed management decisions, and thus create the basis for efficient digitalization.

We support companies in achieving their goals: making after sales leaner, effectively reducing production, maintenance and procurement costs, and building up master data in line with processes and ERP (SAP).

D&TS makes companies fit for digitalization and Industry 4.0.
